

**BADLANDS MOTORCYCLE PRODUCTS' VISIBILITY
LIGHTING KITS INCLUDE TAILLIGHT, FRONT & REAR
LEDS, AND RUN/ BRAKE/TURN ILLUMINATOR MODULE
WITH BUILT IN LOAD EQUALIZER**

Call and tell us what year/model Harley you have and we will determine which module plug configuration will plug into your factory harness. Let us know if you want SMOKE lenses or if you want to keep the back all RED. The LEDs are red for the rear, in both the taillight and LED inserts. The front inserts are amber, so you can do red or smoke lenses in the rear with no significant loss of brightness, and amber or smoke lenses in the front.

Your Harley year & model will tell us which inserts fit your bike, as well as the correct taillight, but only if everything is stock... So be sure to tell us if you have made changes to the turn signals, other lighting modules that may be installed, and the location of the plate frame. Many customers have moved the plate frame to under the taillight like on the new Street Glides, in which case you wouldn't need a license plate light shining on nothing!

When you call in, ask us to build you a complete kit (Taillight, Module, LEDs & lenses if needed), refer to this website and as an internet customer we'll be happy to offer you a 10% discount!
